

## ASSEMBLY INSTRUCTIONS

# SCREW-ON SLEEVE

## WHEN USING A NEW HAMPTON LONG SIDE TABLE

**Scope of delivery:** 1 x extension, 1 x hex screw M12 x 160

### ASSEMBLING THE SLEEVE:

If possible, stand the base plate on its side so that you have easy access to both sides. Take the hex screw, fit first the spring washer and then the washer onto it and insert the screw through the bore hole in the base plate from the underside. Now fit the extension onto the screw and screw it onto the sleeve. To do this, you will need a size 19 box wrench.

To place the New Hampton long side table over the sleeve, first remove the knurled screw, fit the recess of the long side table over the sleeve and insert the knurled screw again (see Fig. 2 below).

You adjust the height of the umbrella to suit the location or your personal taste by shortening the pole. (All our umbrellas are manufactured to a height suitable for use with a ground sleeve set in concrete, i.e. the poles are approximately 28 cm longer).

Now insert the umbrella into the sleeve and tighten the knurled screw.
